Brand Identity Standards

February 2026
Edition 01

Document Status & Usage Notice

This document represents Version 1.0 of the WPT Identity Standards.

It defines the official rules, structures, and principles governing the use of the WPT brand identity at the time of publication.

All visual, verbal, and structural elements described in this document are mandatory and must be applied as specified.

Before using, reproducing, or adapting any element of the WPT identity system, users must verify whether a newer or updated version of this document has been released.

In the event of discrepancies between versions, the most recent approved version prevails.

Any use of the WPT identity that does not comply with the rules set out in this document is considered unauthorized and may result in inconsistencies in brand representation.

For clarification, interpretation, or approval of exceptional use cases, prior confirmation must be obtained from the WPT brand owner or its designated representative.

A Word from the Founder

Waste Power Tech was created out of a practical need to address a problem that has become increasingly complex: **how we manage waste in a world that requires energy, efficiency and accountability at the same time.**

From the beginning, our focus has been on method rather than messaging. The technology behind WPT is the result of years of applied research, testing and validation, designed to operate at a fundamental level of matter transformation. As the company evolved, it became clear that the challenge was no longer only technical. It was also about clarity - how this method is understood, interpreted and trusted by institutions, partners and the public.

This brandbook marks an important step in the evolution of WPT. It does not aim to simplify what we do, but to express it correctly. Its role is to define a clear framework for how WPT presents itself, communicates and operates as a coherent system. Not to persuade, but to explain. Not to impress, but to establish trust.

WPT exists to make complex processes functional and transparent. This document reflects that same principle.

Janos Szakacs
Founder, Waste Power Tech

Market Context
Waste, Energy and Public Confusion

The waste and energy sectors operate today in a landscape marked by urgency, pressure and conceptual confusion. Waste volumes are increasing, energy demand is rising, and public expectations for sustainable solutions are higher than ever. In this context, multiple technologies coexist under similar labels, often simplified or inaccurately described using familiar but misleading terms.

For the general public, most waste-to-energy processes are perceived as variations of the same idea: waste is “burned” to produce energy. This oversimplification collapses fundamentally different technologies into a single mental category, erasing important distinctions between controlled scientific processes and legacy methods. As a result, innovation is often misunderstood, and genuinely advanced solutions risk being perceived as conventional.

At the same time, institutions, industry partners and investors are required to make decisions in an environment where language is inconsistent and technical differences are poorly translated into public understanding. The lack of a clear, shared vocabulary creates mistrust, resistance and hesitation - not because solutions are ineffective, but because they are not clearly understood.

Within this landscape, the challenge is no longer only technological. It is perceptual. The ability to clearly define, explain and differentiate a method becomes as critical as the method itself.

Introduction

The Role of the Brand Book

This brand book defines the strategic, verbal and visual foundations of Waste Power Tech. Its role is to ensure clarity, consistency and accuracy in how WPT is presented, understood and represented across all contexts. The document translates the company's method and positioning into clear rules and principles, providing a shared reference for internal teams, partners and external collaborators. It is not a marketing guide, but a control framework designed to protect the integrity of the WPT method and its public perception.

How to Use This Document

This brand book should be used as a practical reference in all communication, design and representation of WPT. It establishes what is fixed and what can adapt, offering clear guidance rather than subjective interpretation. Whenever a decision is made regarding messaging, visual identity or public presence, this document should be consulted to ensure alignment with the WPT system. If a use case is not explicitly covered, the principles outlined here should be applied as a decision-making filter rather than improvisation.

What This Brand Book Is Not

This brand book is not a marketing manual. It does not define campaigns, advertising tactics or promotional strategies. It is not designed to generate visibility, emotional engagement or commercial appeal in a traditional sense.

It is also not a collection of creative ideas or visual inspiration meant to be interpreted freely. The purpose of this document is not to encourage variation, but to establish coherence and control.

Instead, this brand book functions as a reference system. It sets boundaries, clarifies decisions and ensures that Waste Power Tech is represented accurately, consistently and responsibly, in line with its role as a method-driven, technology-focused institutio

WPT Concept

Why WPT Exists Today

Waste Power Tech emerges at a moment when both waste management and energy production are under increasing pressure to deliver measurable results, not intentions. The scale and complexity of waste streams have grown beyond what conventional recycling or recovery models can handle efficiently. At the same time, energy systems are required to be more resilient, diversified and accountable.

In this context, incremental improvements are no longer sufficient. What is needed is a method capable of operating at a more fundamental level - one that can address materials previously considered unusable and convert them into functional output. WPT exists to respond to this structural gap: where waste becomes too complex for traditional solutions, and energy demand continues to rise.

The Real Perception Problem

The primary challenge facing advanced waste-to-energy technologies today is not performance, but perception. In public and institutional discourse, fundamentally different processes are often grouped under the same simplified narratives. Complex technologies are reduced to familiar terms, leading to misunderstanding and resistance.

When advanced methods are perceived as variations of legacy solutions, their value is diminished and their differentiation disappears. This creates hesitation among decision-makers and confusion in the public sphere. The result is not a rejection of technology, but a lack of clarity around what truly distinguishes one approach from another.

WPT addresses this gap by placing clarity at the center of its identity. The ability to explain the method accurately is treated as an integral part of the method itself.

WPT Waste Power Tech

A Three-Pillar Communication Framework

A Three-Pillar Communication Framework

All WPT communication is structured around a simplified and consistent narrative framework. Regardless of format, audience or context, the message is organized through three fundamental modules that reflect the logic of the method itself.

Waste represents the starting point: complex, contaminated material streams that are widely understood and recognized as a problem.
Power represents the outcome: measurable energy and value recovered through transformation.
Technology represents the enabler: the controlled process that makes this conversion possible.

By structuring communication around these three pillars, WPT ensures clarity and coherence across all touchpoints. The complexity of the method is not reduced, but organized in a way that allows it to be understood without distortion. This framework acts as a common language, aligning technical reality with public understanding.

Waste → Power → Technology is not only the operational logic of WPT, but also the foundation of how the brand speaks.

A Three-Pillar Communication Framework

WPT

The WPT system is built on a simple but non-negotiable logic: transformation follows a clear sequence.

Waste represents raw, inert matter - complex, contaminated and often considered unusable.
Power is the result - energy and value made accessible through transformation.
Technology is the mechanism that enables the transition, operating with precision, control and repeatability.

This order is essential. Power is not extracted directly from waste, and technology is not an end in itself. Technology exists to mediate the process, breaking molecular bonds and reconfiguring matter in a controlled way. The outcome is not destruction, but conversion.

Waste → Power → Technology is not a slogan. It is the operating logic of WPT.

Waste ----------> Power

Waste and power are not new concepts. They are universally understood, familiar and already embedded in collective perception. Everyone recognizes what waste represents, and everyone understands the value of energy. What is not universally understood - and what truly differentiates WPT - is the method that connects the two.

A Three-Pillar Communication Framework

Molecular Disintegration as the Core Differentiator

This connection is made through molecular disintegration. It is the enabling process that transforms waste into power by operating at a fundamental level of matter. Rather than relying on conventional approaches or surface-level treatments, WPT intervenes where value is structurally locked: within molecular bonds.

Molecular disintegration is not a narrative device. It is a certified, proprietary method and the foundation of the WPT system. It is the only element of the equation that is new, specific and defensible. For this reason, all communication converges on this process - not to complicate the message, but to clearly articulate what makes WPT fundamentally different.

Waste and power define the problem and the outcome. Molecular disintegration defines the method.

Positioning

Positioning

The Science Frontier

For this reason, WPT is positioned at the intersection of applied science and real-world infrastructure. It operates at the edge where existing solutions no longer function and new methods must be developed, tested and validated. The Science Frontier is not a claim of innovation for its own sake, but a statement of operating depth: WPT works at a level where transformation requires scientific understanding, precision and control.

This positioning places WPT beyond incremental improvement and away from simplified technological narratives. It defines the company as a frontier actor - not because it explores the unknown, but because it applies science where complexity can no longer be ignored.

A Private Institution of Applied Science

WPT is structured and perceived as a private institution rather than a commercial brand. Its authority does not come from visibility or promotion, but from method, validation and consistency. The company operates independently, guided by scientific rigor and operational responsibility, while remaining accountable to the environments in which it functions.

This institutional posture allows WPT to engage credibly with governments, industry partners and investors without adopting the behaviors of a traditional commercial entity. It signals stability, seriousness and long-term commitment.

Positioning

What WPT Is

A method-driven organization

A system for controlled matter transformation

A science-based solution for complex waste streams

An applied technology with measurable outcomes

WPT is not:

A marketing-led energy brand

A generic waste-to-energy solution

A symbolic or emotional sustainability narrative

A company defined by campaigns or slogans

Brand Personality

WPT behaves like an engineer, not a spokesperson. It is calm under pressure, precise in execution and deliberate in communication. Its confidence comes from understanding the process at a fundamental level, not from asserting superiority. The brand does not rush to explain itself, nor does it react defensively; it allows facts, structure and method to speak first.

At its core, the WPT personality is rational, disciplined and controlled. It avoids emotional amplification and symbolic exaggeration, favoring measured statements and verifiable claims. This restraint is intentional: it signals maturity, institutional credibility and long-term reliability.

While the brand is predominantly rational and scientific, it is not inaccessible. Its clarity, order and transparency create a sense of safety and trust. WPT does not seek admiration - it seeks understanding.

Brand Personality

Personality in Practice

The WPT personality supports its positioning as a private institution of applied science - serious, reliable and focused on function rather than image.

Calm,
not loud

Precise,
not expressive

Confident,
not aggressive

Rational,
not emotional

Structured,
not decorative

Brand Archetypes

Primary Archetype: The Sage

Driven by knowledge, evidence and understanding. Authority comes from depth, not volume.

Secondary Archetype: The Creator

Focused on building systems and processes that function in the real world.

Accent Archetype: The Guardian

Present in the background through responsibility, stability and protection - never emotional, always controlled.

Brand Principles

Rule!
If a decision weakens the clarity of the method, it is not aligned with WPT - regardless of short-term gains.

1. Method Before Message

WPT never communicates before understanding and defining the method. Messaging is a consequence of how the system works, not a tool to compensate for complexity or uncertainty.

2. Clarity Is a Responsibility

If the process cannot be explained clearly, it is not communicated. WPT treats clarity as an operational duty, not a communication preference.

3. Precision Over Emphasis

WPT avoids exaggerated language, superlatives or emotional framing. Precision and accuracy take priority over impact or visibility.

4. Explain, Don’t Persuade

The role of WPT communication is to explain how the process functions, not to convince through emotion, pressure or narrative shortcuts.

5. Verifiable Over Promising

All claims must be measurable, demonstrable or certified. WPT avoids promises that cannot be validated through process or data.

6. Form Follows Process

Visual identity, language and structure must always reflect how the method operates. Decoration without function is not acceptable.

Target Audience

WPT does not address a single audience, but multiple decision-making environments. Each audience interacts with the same method, yet perceives it through different expectations, responsibilities and pressures. The role of the brand is not to change its identity, but to ensure correct understanding across these contexts.

Primary Audience Institutional Decision Makers (B2G)

Government institutions and public authorities are the primary audience for WPT. These stakeholders operate in highly regulated environments, where risk, accountability and public scrutiny shape every decision.

They require:
clarity over intention,
method over promise,
verifiable processes over narratives.

For this audience, WPT must function as a credible, stable and institutional actor - closer to a technical authority than a commercial supplier.

Secondary Audience Industrial and Infrastructure Partners (B2B / B2I)

Industrial operators and investors interact with WPT from an operational and financial perspective. Their focus is on performance, predictability and scalability.

They require:

technical clarity,
process transparency,
measurable outcomes.

For this audience, WPT is evaluated as a system: how it functions, how it integrates and how it performs over time.

Target Audience

Contextual Audience NGOs and Public Stakeholders

NGOs and public opinion form an indirect but influential audience. While they are not direct users of the technology, they shape perception, acceptance and resistance.

They require:
- accurate explanations,
- transparency,
- absence of misleading or emotional framing.

For this audience, WPT must be understandable without simplification, and defensible without rhetoric.

Audience Principle

WPT does not adapt its method to its audience.
It adapts its explanation.

The identity, language and visual system remain constant. Only the level of explanation and contextual framing changes to ensure clarity and trust.

Core Insight

WPT operates in environments where misunderstanding has real consequences. Therefore, the brand treats perception as a functional layer of the system, not as a communication exercise.

Perception Strategy by Audience

WPT operates with a single method, a single identity and a single core logic. However, this logic is interpreted differently depending on the context in which it is encountered. The role of the perception strategy is not to adapt the brand, but to control how the brand is understood across different audiences.

This process can be described as refraction: the same system remains intact, while its explanation adjusts to the expectations, responsibilities and decision frameworks of each audience.

Institutional Audience (B2G)

For public authorities and governmental institutions, WPT must be perceived as a stable, neutral and accountable actor.

Perception focus:
• Institutional credibility
• Risk control
• Regulatory compatibility

What they need to understand:
• That WPT operates through a certified, controlled method
• That molecular disintegration is not combustion
• That the process is verifiable and auditable

How the brand refracts:
• Language is formal and precise
• Visual identity emphasizes structure, order and restraint

Communication avoids emotion and positioning against alternatives

Industrial and Investment Audience (B2B / B2I)

For industry partners and investors, WPT must be perceived as a functional, scalable and reliable system.

Perception focus:
• Performance and efficiency
• Integration and scalability
• Long-term operational stability

What they need to understand:
• How the system performs
• Where value is created
• How molecular disintegration enables conversion of complex waste streams

How the brand refracts:
• Language is technical and outcome-oriented
• Visual identity highlights systems, flows and precision

Communication is structured around process and results

Perception Strategy by Audience

NGOs and Public Stakeholders

For NGOs and public stakeholders, WPT must be perceived as transparent, defensible and accurate.

Perception focus:
• Correct explanation of the process
• Absence of misleading or emotional framing
• Accountability

What they need to understand:
• That WPT does not rely on combustion
• That molecular disintegration operates at a structural level
• That outcomes are measurable and controlled

How the brand refracts:
• Language is explanatory, not promotional
• Visual identity avoids symbolic exaggeration
• Communication prioritizes clarity over persuasion

General Public

For the general public, WPT must be perceived as understandable and trustworthy, without oversimplification.

Perception focus:
• Clear distinction from “burning waste”
• Basic understanding of the process
• Confidence in control and safety

What they need to understand:
• Waste is the starting point
• Power is the result
• Molecular disintegration is the method that connects the two

How the brand refracts:
• Language is simple and direct
• Visual identity uses familiar reference imagery for waste and power
• The method is explained through structure, not metaphor

General Description

The tone of voice of WPT is clear, controlled and precise. It reflects the way the method operates: structured, deliberate and free of unnecessary complexity. WPT does not persuade, dramatize or simplify through metaphor. It explains.

All communication follows the same internal logic as the technology itself: from waste to power, enabled by technology. Messages are built step by step, using simple language and short sentences that reduce confusion rather than add nuance. The goal is understanding, not impact.

WPT speaks calmly and confidently, without exaggeration or emotional charge. Authority comes from clarity, not from emphasis.

Tone of Voice

Core Rule
If a message cannot be clearly explained using the
Waste → Power → Technology logic, it should not be used.

Do

Follow the Waste → Power → Technology structure
Start from the problem (waste)
Define the outcome (power)
Explain the mechanism (technology)

Keep the language simple and direct
Short sentences
One idea per statement
Clear cause–effect logic

Explain, don't persuade
Focus on how the process works
Use factual, descriptive language
Let the method speak for itself

Maintain a calm and controlled tone
Neutral wording
Confident, not emphatic
No urgency or hype

Use precise terminology consistently
Use "molecular disintegration" as the core term
Explain it using the same logic every time

Example (Do):
Waste is the starting point. Power is the outcome.
Molecular disintegration is the process that enables
conversion through controlled technology.

Tone of Voice

Don’t

Don’t use emotional language
No dramatic framing
No moral pressure
No inspirational slogans

Don’t rely on metaphors or poetic language
Avoid symbolic storytelling
Avoid abstract imagery

Don’t be vague or generic
Avoid broad sustainability claims
Avoid unclear or undefined benefits

Don’t use familiar but inaccurate terms
No “fire”
No “burning”
No “incineration”
No “saving the planet”

Don’t use commercial or sales-driven language
No marketing promises
No exaggerated claims

Example (Don’t):
We burn waste to create clean energy and help save the planet.

Official WPT Vocabulary

Approved Terms (Use Consistently)

These terms define how WPT explains its method and must be used consistently across all communication.

Waste

The starting point. Complex, contaminated material streams.

Power / Energy

The measurable outcome of the process.

Technology

The controlled mechanism enabling transformation.

Molecular Disintegration

The certified core process of WPT. Breaking molecular bonds to enable conversion.

Molecular Bonds

Structural connections within matter that lock value.

Controlled Process

A repeatable, regulated technological operation.

Material Conversion

Transformation at a fundamental level, not surface treatment.

Applied Science

Science used to solve real-world, industrial problems.

Method / System

WPT as a structured, repeatable approach.

Process Efficiency

Measurable performance of the system.

Official
WPT Vocabulary

Restricted Terms
(Do Not Use)

These terms create confusion, reduce differentiation
or distort perception and must be avoided.

Fire

Burning

Incineration

Flames / Heat-based metaphors

Saving the planet

Eco-friendly (generic use)

Revolutionary / Game-changing

Sustainability slogans

Official WPT Vocabulary

Conditional Terms (Use with Care)

These terms may be used only with clear explanation and context

Energy from waste

Must always be linked to molecular disintegration, not combustion.

Advanced technology

Must be specified and demonstrated.

Innovation

Use only when referring to the certified method.

Environmental impact

Use in measurable, factual terms only.

Core Language Rule
If a term simplifies the understanding but removes the method, it should not be used.
If a term protects the method and clarifies the process, it is allowed.

WPT Press Release Template

Headline

Clear, factual,
method-focused.
No adjectives, no claims
without explanation.

Example:
Waste Power Tech
Introduces a Controlled
Molecular Disintegration
Process for Energy Recovery

Subheadline

Clarifies the method
in one sentence.

Example:
A certified technology
enabling the conversion of
complex waste streams into
energy by breaking molecular
bonds.

Lead Paragraph (What / Why / How)

The first paragraph must explain what
happens, why it matters, and how it
works, in simple terms.

Template:
Waste Power Tech (WPT) announces [event / development / implementation]. The WPT system addresses complex waste streams that are difficult to process using conventional methods, enabling energy recovery through a controlled technological process. At the core of this system is molecular disintegration - a method that breaks molecular bonds to allow material conversion without combustion.

WPT Press Release Template

Context Paragraph (The Problem)

Define the problem clearly,
without dramatization.

Template:
Waste management and energy recovery face increasing pressure as material streams become more complex and contaminated. Many existing solutions rely on surface-level treatment or are perceived as variations of the same approach, leading to confusion and resistance. This context requires methods that operate at a more fundamental level of transformation.

Method Paragraph (The Differentiator)

This is the most important section.
It must always include molecular disintegration.

Template:
The WPT method is based on molecular disintegration, a certified process that intervenes at the structural level of matter. By breaking molecular bonds through controlled technology, the system enables the reconfiguration of waste materials into usable energy. The process is repeatable, measurable and designed to operate within strict technical parameters.

Quote (Founder / Technical Authority)

No vision talk. No inspiration.
Only clarity and responsibility.

Template:
"WPT was developed to address a technical gap," said [Name, Title]. "Our focus has always been on method rather than messaging. Molecular disintegration allows us to work with materials that were previously considered unusable, using a controlled and verifiable process."

WPT Press Release Template

Application / Impact Paragraph (What This Enables)

Explain outcomes, not promises.

Template:
By applying molecular disintegration, WPT enables energy recovery from complex waste streams while maintaining process control and transparency. The system is designed for institutional, industrial and infrastructure-level implementation, supporting long-term operational stability.

About Waste Power Tech

Template:
Waste Power Tech (WPT) is a method-driven organization operating at the intersection of applied science and waste-to-energy infrastructure. The company develops and implements controlled technological systems based on molecular disintegration to enable the conversion of complex waste into energy. WPT operates as a private institution of applied science, focused on clarity, precision and measurable outcomes.

Mandatory Rules for All WPT Press Releases

Molecular disintegration must appear at least once

No use of “fire”, “burning”, “incineration”

No emotional or moral framing

No sustainability slogans

Clear Waste → Power → Technology logic

Visual identity

Logo

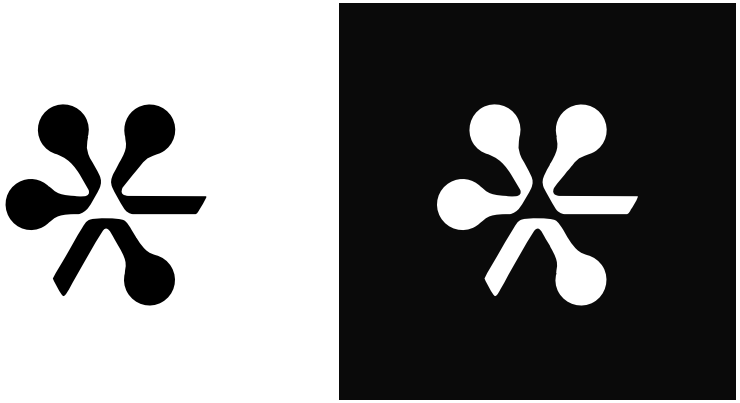
Logo

Simbol

The WPT symbol represents the most concentrated form of the brand's identity. It is a visual abstraction of transformation - a controlled process in which dispersed elements converge into a coherent system.

Built from firm geometries and directional forms, the symbol reflects the way WPT operates at a structural level: breaking existing configurations and reorganizing them through precision and control. The visual tension within the symbol mirrors the interference and complexity of fragmented waste streams, resolved through applied science into a unified outcome.

The symbol exists in two monochrome versions: positive (black on white) and negative (white on black). These versions ensure consistent application and optimal legibility across all environments, maintaining clarity, contrast and precision in every context in which WPT operates.



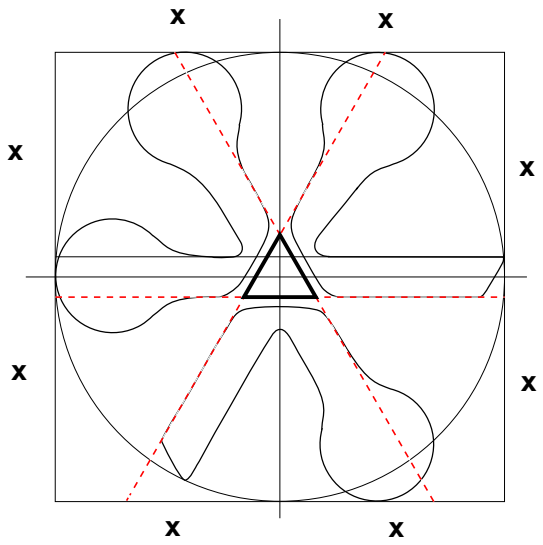
Logo

Logo lockups

The logo lockup defines the precise spatial relationship between all elements of the WPT mark. These proportions are fixed and must remain unchanged to ensure visual coherence and the integrity of the brand identity.

The system is constructed on a controlled geometric grid that governs balance, alignment and internal tension. This structure reflects the way the WPT method operates: through order, calibration and repeatability. The grid ensures consistent scaling and legibility across all formats and applications.

Any modification - including adjustments to alignment, spacing or relative proportions - compromises the structural balance and clarity of the logo. The lockup must be reproduced exactly as specified in this guide to guarantee consistency across all visual touchpoints where WPT is represented.



Logo

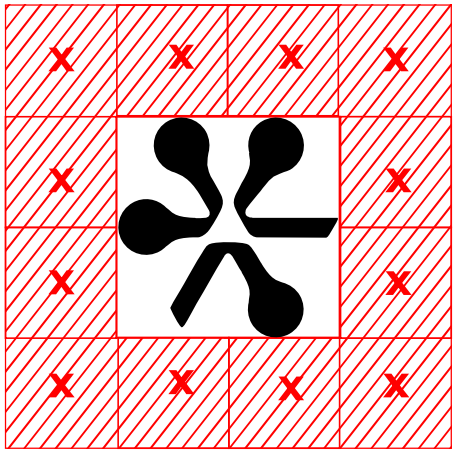
Symbol Clear Space

To ensure legibility and visual impact in all contexts, the WPT symbol must be surrounded by a clear area, free of any other graphic elements, text or imagery.

The clear space is defined as one half of the symbol's total height and must be preserved on all sides. This proportion is a fixed rule and applies consistently across all formats, sizes and applications.

Minimum clear space - used in compact layouts where maintaining clarity and recognition is essential.

No element may enter this protected area under any circumstances, regardless of format, medium or scale. Respecting the clear space is mandatory to preserve the integrity, authority and readability of the WPT symbol.



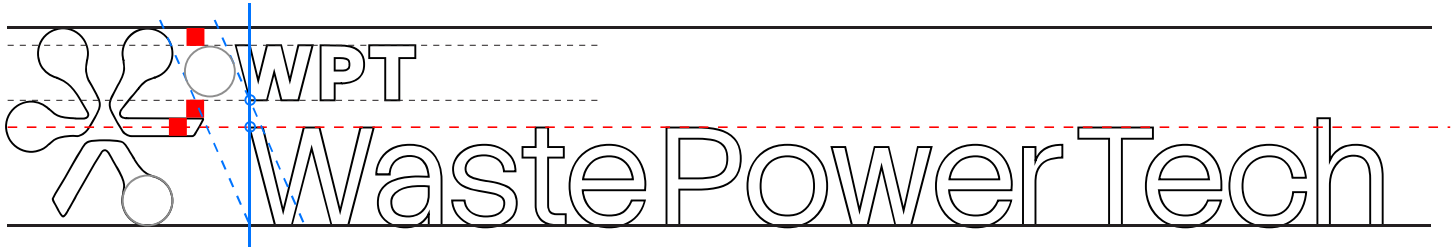
Minimum clear space

Logo with Tagline

The logo with tagline represents the complete signature of Waste Power Tech, combining the visual identity with the verbal definition of the method. The relationship between the logotype and the tagline is precisely calibrated to preserve clarity, hierarchy and structural balance.

The tagline reinforces the positioning of WPT and must always appear exactly as defined in this guide. No modifications to scale, alignment or spacing are permitted. Together, the logo and the tagline function as a single, controlled unit - clear, stable and immediately recognizable.

The full logo with tagline is the most formal and institutional expression of the WPT

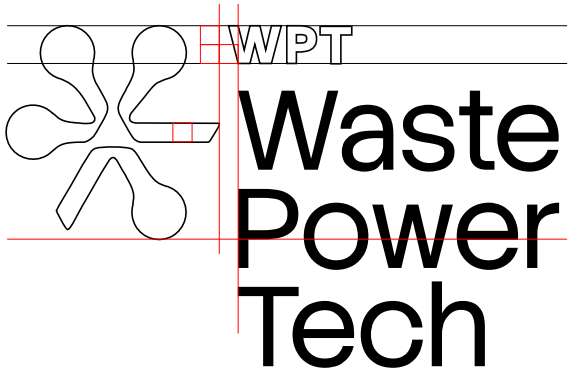


Secondary Logo:
Symbol + Logotype + Tagline

This version represents the secondary signature of the WPT brand and is the most expressive configuration of the identity. It is intended for contexts where sufficient space and scale allow the tagline to remain fully legible and clearly articulated.

The spatial relationship between the symbol, logotype and tagline is fixed. All proportions are carefully calculated to preserve visual balance, hierarchy and clarity. No modifications to spacing, scale or alignment are permitted.

Although this is the most decorative and commercially expressive version of the WPT logo, it must still be used with restraint. It is not intended for frequent or casual application, but as a controlled signature in contexts where full brand articulation is appropriate.



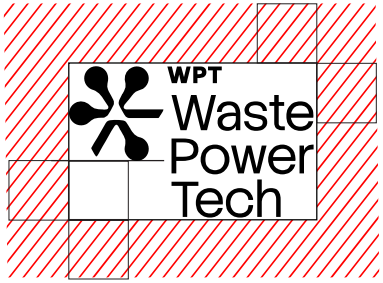
Logo

Logo Clear Space

The clear space defines the minimum protected area around the logo that must remain free of any graphic elements, text or imagery.

1. Primary Logo (Horizontal)
For the primary logo, the clear space is defined by the height of the symbol.
This unit is applied uniformly on all sides of the logo and establishes the minimum distance that must be kept clear in any application.
In high-visibility or premium design contexts, an extended clear space may be used to allow the logo to breathe and reinforce its institutional presence.

2. Secondary Logo (Vertical)
For the secondary (vertical) logo, the clear space is defined by the negative space directly beneath the symbol.
This measurement reflects the internal structure of the logo and must be applied consistently on all four sides. As with the primary logo, the clear space may be extended in special applications where additional visual separation improves clarity and hierarchy.



Logo Usage by Variant

The symbol is a compact and flexible expression of the WPT identity. It is used in constrained spaces or in contexts where the brand is already recognizable and full verbal identification is not required.

This version is suitable for technical, internal or system-level applications, where clarity, precision and minimal visual presence are essential. While secondary in hierarchy, the symbol must still respect all construction and clear space rules.

The primary logo is the most complete and authoritative representation of WPT. It should be used in all client-facing materials and official communication where the brand's positioning needs to be expressed clearly and explicitly.

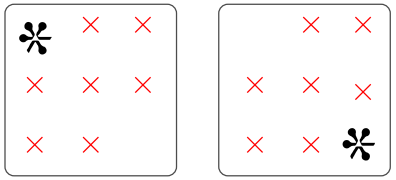
This version ensures immediate recognition and full articulation of the brand name, reinforcing WPT's institutional and method-driven character.

Secondary Logo
Both logo configurations may be used in corporate communication. The selection depends on available space, legibility requirements and design context.
When the environment allows for full readability and structural clarity, the secondary logo may be used to express the complete identity. In more constrained or technical contexts, the primary logo or symbol is preferred.

Symbol Placement Across Formats

To ensure consistency, visibility and the strength of the visual identity, the WPT symbol must be positioned strategically, according to format and composition. Within the WPT brand system, symbol placement is not decorative; it functions as a visual anchor that stabilizes perception and supports the overall structure of the content.

Corner Placement: Top Left & Bottom Right



The top-left and bottom-right corners are the recommended positions for symbol placement in structured layouts. These positions are used when the symbol is not the central element, but rather an identity marker that accompanies the content and reinforces brand presence.
This placement maintains clarity and hierarchy, allowing other visual elements to occupy the center of attention while the symbol quietly asserts brand authority. It is the preferred option for institutional, technical and informational materials.

Central Decorative Element (High Expressive Use)t

The symbol may occupy the central area of the composition as a dominant visual element in formats where the logo itself is the primary message.

In these cases, the symbol can:
• Support and endorse other visual elements (such as images, people or products),
• Be positioned behind or around them as a sign of visual authority,

These applications are recommended only for special campaigns, presentations, brand materials or editorial contexts, where visibility and expressiveness are prioritized over restraint.

Placement Principle
The symbol does not decorate the layout.
It structures it.

Logo

Logo Placement Across Formats

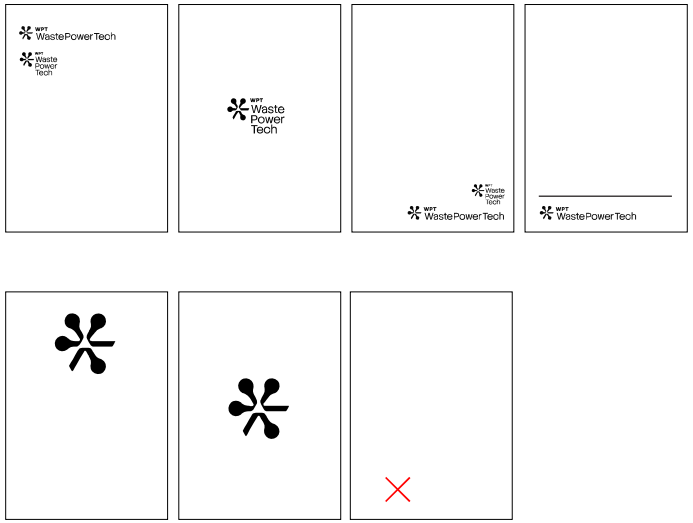
Logos that include the logotype (the name “Waste Power Tech” and the tagline) follow strict placement rules to ensure legibility, visual balance and consistency across all brand applications.

Primary Logo
The primary logo is aligned with the reading flow of the composition, typically placed in the top-left or bottom-right corner. This positioning respects natural visual scanning patterns and introduces the brand subtly into the layout without dominating the composition.

This placement is recommended for institutional, informational and content-driven materials where the brand supports the message rather than becoming the message itself.

Secondary Logo
The secondary logo is positioned exclusively on the central axis of the layout. Its vertical construction requires a more solemn, symmetrical placement to maintain balance and ensure maximum visibility.

This version is used when the logo functions as a central identifier and needs to assert the brand more explicitly, without competing with other visual elements.



Transforming Waste into Power Through Technology

Typography plays a critical role in the WPT visual identity, contributing directly to clarity, credibility and professional perception. Type choices reflect the core values of the brand: precision, control and technical rigor, ensuring consistent and legible communication across all materials, regardless of format or channel.

To achieve a balanced relationship between authority and accessibility, WPT uses two complementary type families. Together, they support a clear hierarchy and reinforce the brand's institutional and science-driven character, without introducing unnecessary expressiveness or stylistic noise.

Typography

Fonts

Stack Sans Headline

Usage: Headlines, titles, visual accents

Stack Sans Headline is a contemporary typeface with solid forms, clean cuts and a distinctly technical character. It is well suited for a brand rooted in engineering and applied science. Its visual presence is strong and controlled, conveying order, precision and structural clarity - qualities that align directly with the WPT method.

This typeface is used to define entry points in content and to establish hierarchy. It delivers immediate visual impact while maintaining a sober, institutional tone across presentations, reports, websites and official materials.

Figtree Body text

Usage: Body text, paragraphs, informational content

Figtree is a versatile and highly legible typeface, optimized for both screen and print. Its neutral and balanced construction supports long-form reading without drawing attention away from the content itself.

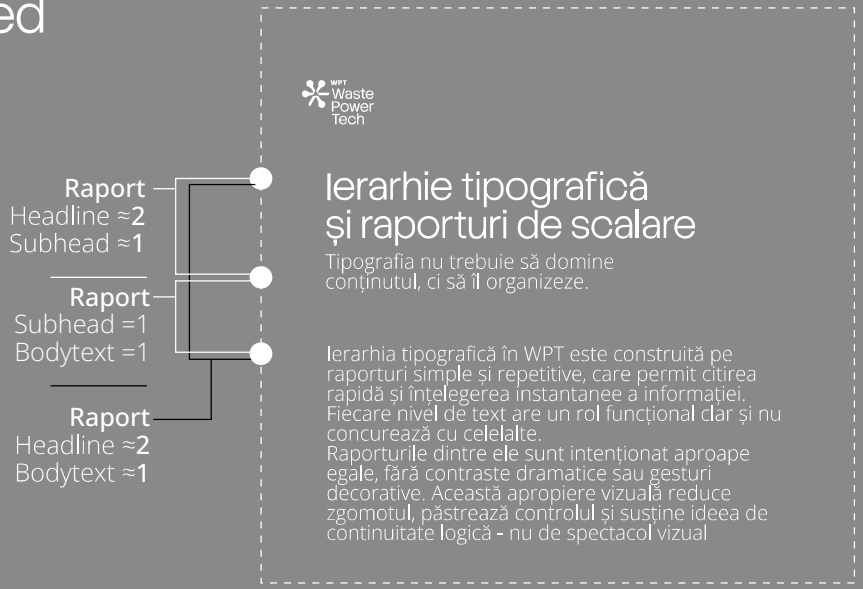
Figtree complements Stack Sans Headline by providing accessibility and clarity where explanation is required. It sustains the informative and technical nature of WPT communication, making it suitable for documentation, technical descriptions and corporate communication where precision and readability are essential.

Why Typography Is Not Centered and Not Right-Aligned

Centered text is perceived as static and ceremonial. It removes direction and weakens the sense of process. For WPT, which operates through sequence, logic and transformation, centered typography would flatten the message and disconnect it from the idea of flow and causality.

Right alignment disrupts natural reading patterns in left-to-right languages. It creates unnecessary visual tension and slows comprehension.

Left alignment supports structure, logic and progression. Left-aligned typography mirrors how technical documentation, scientific papers and institutional reports are built. It creates a clear entry point, consistent rhythm and a predictable structure that guides the reader through information step by step.



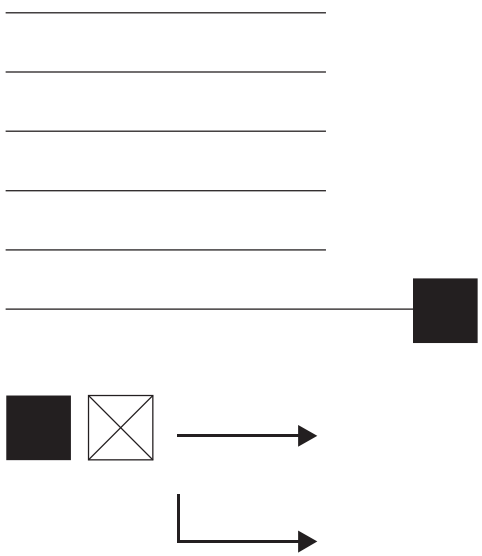
Horizontal Lines and Dividers

The WPT visual system is primarily built around horizontal lines, axes and dividers because these structures are the most stable and universally legible forms in human perception. They communicate control, order and predictability - essential attributes in institutional, technical and decision-driven contexts.

Horizontal lines act as anchors within the composition. They stabilize the layout, organize information and guide reading flow in a calm and structured way. Rather than drawing attention to themselves, they create a framework in which information can be absorbed quickly and without cognitive friction.

Why Rounded Shapes Are Avoided (Except for the Logo)

Within the WPT identity, rounded shapes are reserved exclusively for the logo. This deliberate limitation establishes a clear visual hierarchy: the logo becomes the singular point of transformation and energy, while the rest of the system remains stable, rational and controlled.



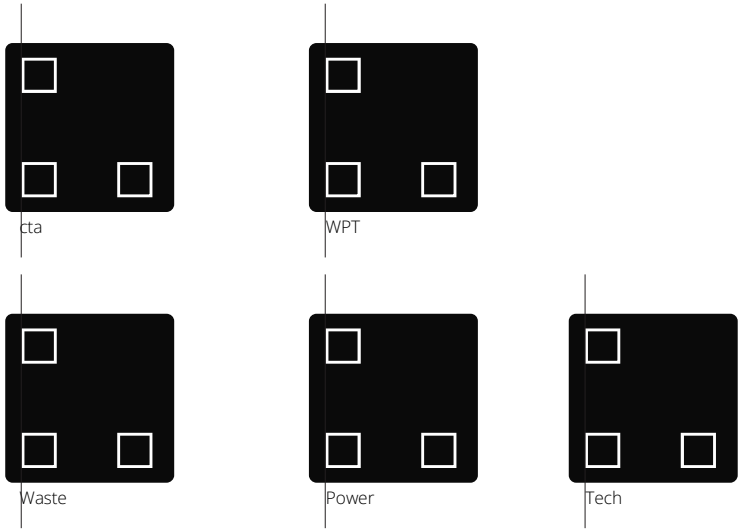
QR Codes & Links as Modular Language

In a fragmented operational landscape, WPT is designed to create continuity.

Within the WPT system, QR codes operate as modular language units. Each module can carry a specific layer of meaning: process explanation, technical data, certification, compliance, or next operational steps. Together, these modules form a coherent structure, without overloading the surface of communication.

The presence of a QR code signals that the system is documented. That there is a method, a traceable logic, and a controlled process behind every action. It communicates preparedness, transparency and operational maturity — without verbal emphasis.

In this sense, the QR code becomes a silent signature of the brand. Not promotional, but operational. Not persuasive, but supportive. Always present, always functional — enabling continuity, anticipating questions and sustaining flow without demanding attention.



The Role of Color in the WPT Identity

The WPT color system is built around three distinct color zones, each with a precise functional role. This is not a decorative palette, but an operational system that structures perception, hierarchy and attention.

Waste Grey
The Neutral Origin

RGB: 142, 142, 142	HEX: #8E8E8E	CMYK: 0, 0, 0, 44	Pantone: Cool Gray 7 C

Grey represents Waste — the starting point of the process.
It is the only non-color in the WPT system, deliberately chosen to avoid emotional coding, symbolism or aesthetic judgment.

Waste is not good or bad.
It is matter before interpretation

Grey functions as a neutral state, a visual zero point. It does not communicate value, intention or outcome - only presence. This neutrality is essential: WPT does not dramatize waste, does not romanticize it, and does not aestheticize pollution. Waste is treated as input, not narrative.

Power Red
Activated Energy

RGB: 237, 28, 36	HEX: #ED1C24	CMYK: 0, 100, 85, 7	Pantone: 186 C

Within the WPT color system, red represents POWER — not as emotion, but as activated, released, and controlled energy.

How Power Red Is Used
Power Red is not a permanent background color and not a decorative branding element. It is a functional color, used deliberately and sparingly.

It appears to: mark transformation, highlight output, signal points where energy has already been produced or delivered.

Core Blue Technology Infrastructure

RGB: 0, 0, 255	HEX: #0000FF	CMYK: 100, 100, 0, 0	Pantone: 2728 C

In the WPT visual system, blue represents TECHNOLOGY - not as innovation hype, but as infrastructure, control, and method.
This blue is not emotional, not atmospheric, and not decorative.
It functions as a technical constant: the visual equivalent of a protocol, a system, a repeatable process.
Technology is the invisible layer that makes the transition from Waste to Power possible.
Blue is the color of that layer.

The Role of Color in the WPT Identity

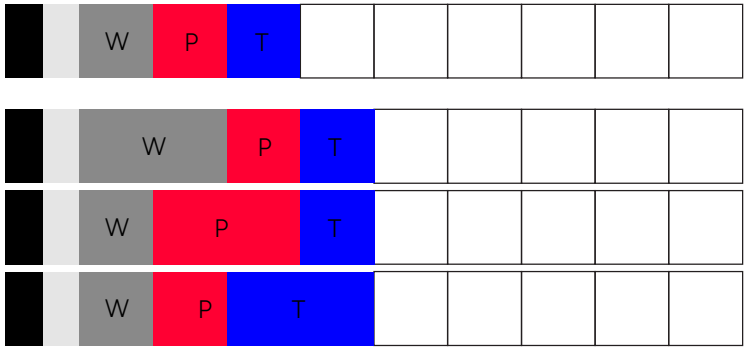
Color System & Proportions

The palette is structured in three layers:
• Neutral accents (black, grey, blue strokes)
• WPT core accents (Waste / Power / Technology)
• White as the dominant field

Why White Dominates
White is the primary visual space of WPT because the brand operates as an explanatory system, not a promotional one.
White represents: clarity, transparency, neutrality, room for understanding.

Accent Colors - Purpose and Use
The first colors in the palette act as structural accents: used mainly in typography, dividers, axes, technical markers, emphasis points.
They guide reading and structure information, without becoming visual noise.

WPT Core Colors
The core WPT colors - Grey (Waste), Red (Power), Blue (Technology) — appear as controlled accents, never as dominant backgrounds unless contextually justified.
The first row represents the general WPT configuration — a balanced, neutral expression of the brand.
However, color proportions can shift depending on the audience



General
Photographic Territory

Photography within the WPT identity is clear, controlled, and factual.
It does not aim to generate emotion, but to document reality as it is - inside professional, industrial, and scientific environments.

We do not stage scenes for impact.
We photograph to explain, to show process, and to establish trust.

Backgrounds are clean, light is natural or technically neutral, and compositions are precise.
Every image is built to support understanding, not to impress.

Photography as a Modular System

The photographic language of WPT follows the same structural logic as the brand itself.
All imagery is organized around three communication modules, aligned with the WPT process:
- Waste
- Power
- Technology

Each module has a distinct visual role and narrative function.
Together, they form a coherent system that mirrors the transformation logic of WPT.

These modules are not mixed randomly.
They are applied deliberately, depending on context, audience, and message.

The following pages detail each photographic module individually, defining:subject matter, framing principles, visual tone, and usage rules.

Waste
Photographic Territory

To reflect the complexity and scale of waste as a problem, the photographic language operates on three complementary directions.

Wide / Contextual Images (Overview)

These images help the viewer understand that waste is not isolated, but part of a larger operational and societal system. They establish urgency without emotional manipulation.

Close-ups & Full-Frame (Visual Saturation)

Waste crosses the visual boundaries and fills the frame completely, leaving no neutral space.
Because waste, before technology intervenes, is overwhelming, uncontrolled, and dominant.

Isolated Material (Decontextualized Waste)

In this direction, waste is shown out of context, isolated from its environment.
Because technology does not operate on stories - it operates on material.

Technology - Product Imagery
Photographic Territory

Product photography is treated as part of an engineering system, not as an isolated visual asset.
The product is documented clearly, precisely, and without interpretation.

The product is shown exactly as it is, so its value comes from function, structure, and purpose.

How Products Are Shown
• Lighting is uniform and neutral.
• Backgrounds are clean, preferably white or neutral grey.
• Angles are technical: frontal, lateral, or 45°, depending on what best explains the structure.
• Textures and materials are visible, without artificial shadows or visual effects.

Mockups, dramatic perspectives, or decorative treatments are not used.

Use of Graphics
Diagrams, overlays, and graphic elements may be used to support understanding, but always: minimal, structural, aligned to the WPT speech logic.

Graphics must follow the same modular structure:
Waste - Technology - Power

W → P

Power
Photographic Territory

In the WPT visual system, Power is the only module where human presence appears explicitly.

Power is not shown as machinery, infrastructure, or abstract output.
It is shown through human interaction with energy.

Why Human Presence

Power exists only when energy becomes usable, experienced, and meaningful.
Without people, power remains an abstract technical result.
Unlike waste, which is material, and technology, which is process,
power is outcome — and outcomes are perceived through people.

How Power Is Represented

Human figures are not staged as heroes or symbols.
They appear in natural, everyday contexts, interacting with energy in a calm, non-spectacular way.

Typical situations include:
- mobility,
- domestic use,
- light,
- comfort

The emphasis is not on emotion, but on normality.
